

## Compilation Work #0

Plone.exe

In the collection, there are separate (independent) works that are incorporated into the whole that is Plone.exe. In this case, the three independent works are plone.py, zope.py and python.exe, which are incorporated along with some “glue logic” (glueLogic.py) to create a distinct software application, Plone.exe. The scope of the copyright in the compilation extends only to the selection and arrangement of the four independent works (plone.py, zope.py, python.exe and glueLogic.py) as they create a new work of authorship. The original copyright owners still retain their respective ownership of their works.
